Variable: "COUNTY"

Name:	COUNTY
Label:	FIPS County code
Variable Text:	<p>COUNTY gives the Federal Information Processing (FIPS) state and county codes for the respondent's county of residence. Counties are assigned codes alphabetically within states. COUNTY also identifies areas that are not part of any specific county, such as independent cities.</p> <p>Geographic data below state level will not be disclosed if certain population thresholds are not met. In general, geographic divisions with fewer than 100,000 people will not be identified. For this reason, there are many unidentified counties.</p> <p>COUNTY was added to the data by the Census Bureau, not collected from respondents.</p>

Coder Instructions:	<p>CodesCOUNTY is a five-digit numeric variable. The first two digits give the FIPS state code; the last three digits give the FIPS county code. If the last three digits of COUNTY are 000, the county is not identified in the data. For a list of counties identified in each state, see the following links for the appropriate codes based on the final CPS interview (YEAR_CPS8 and MONTH_CPS8):</p> <p>Prior to April, 2004 May, 2004-July, 2005 August, 2005 onward</p>

Name:	WT06
Label:	Person weight, 2006 methodology
Variable Text:	<p>WT06 provides ATUS respondent weights based on the weighting methodology introduced in 2006. WT06 is available for all years and is the preferred weighting variable to use for most analyses. It is the only weighting variable that is suitable for use in analyses that combine time use data from 2006 and later with data for earlier years. The methodology used to construct WT06 ensures that the sums of the respondent weights add up to the appropriate number of weekday person-days and weekend person-days over the quarter, both for the population as a whole and for selected subpopulations.</p> <p>All ATUS weights are probability weights. Users should take care to specify them properly in their statistical packages.</p> <p>Because the ATUS sample is not a simple random sample, standard errors calculated using the default options in most statistical packages will not be correct. Variable: "EMPSTAT"

Name:	EMPSTAT
Label:	Labor force status
Variable Text:	<p>EMPSTAT indicates whether persons were part of the labor force--working or seeking work--and, if so, whether they were currently unemployed.</p> <p>Employment status was determined on the basis of answers to a series of questions relating to their activities during the preceding week. Those who reported doing any work at all for pay or profit, or working at least fifteen hours without pay in a family business or farm, were classified as "at work." Those who did not work during the previous week but who acknowledged having a job or business from which they were temporarily absent (e.g., due to illness, vacation, bad weather, or labor dispute) were also classified as employed, under the heading "employed - absent."</p> <p>Unemployed persons make up the third element of the labor force. Individuals were coded as unemployed if they did no work for pay or profit, did not have a job from which they were briefly absent, and answered yes to a question about whether they had been looking for work in the past four weeks. People who were temporarily laid off from a job were also classified as unemployed.</p> <p>Persons who were neither employed nor unemployed fall into the residual category, "not in labor force." Such individuals might be retired, disabled due to an illness lasting at least 6 months, occupied with other activities such as attending school or keeping house, or convinced that they are unlikely to find employment (discouraged workers).</p> <p>EMPSTAT was collected at the time of the ATUS interview. Employment status was also collected at the time of the final CPS interview, 2-5 months before the ATUS interview. See EMPSTAT_CPS8. EMPSTAT_CPS8 distinguishes between not being in the labor force due to retirement, disability, or other reasons, but EMPSTAT does not.</p>

Variable: "CPSIDP"

Name:	CPSIDP
Label:	Unique Longitudinal CPS Identifier
Variable Text:	<p>CPSIDP is an IPUMS-CPS defined variable that uniquely identifies individuals across CPS samples; it is also useful for ATUS-X users who want to link individuals who appear in the ATUS either as respondents, non-respondents, or household members to their earlier observations in the CPS. All individuals in the ATUS except for those who entered the ATUS household after the final CPS interview may be located in the final month of the household's participation in the CPS as indexed by YEAR_CPS8 and MONTH_CPS8; see also PRESENCE for a quick way to identify cases that should link to CPS.</p> <p>The first six digits of CPSIDP index the four-digit year and two-digit month that the household was first in the CPS. CPSIDP allows users to link a respondent appearing with a designated household roster line number (LINENO_CPS8) across samples, based on the 4-8-4 rotation pattern, by assigning a unique CPSID value to this line number. CPSIDP will only ever appear for a maximum of 8 times in the CPS, which is the number of times a household may be observed in the CPS survey (as indexed by MISH in the CPS), and one time in the ATUS. In some cases, individuals will appear in the CPS fewer than eight times due to migration, mortality, non-response, and recording errors. Extensive documentation about the creation of CPSIDP is available elsewhere.</p> <p>Users should note that it is important to verify CPSIDP linkages with AGE_CPS8, SEX_CPS8, and RACE, accounting for differences between IPUMS-CPS and ATUS-X in RACE coding. In some cases CPSIDP will result in erroneous links, which are due to errors in the source data. Cases with the same CPSIDP value may also have inconsistent responses across samples due to errors on the part of the respondent or in recording the response. Ultimately, it is up to the individual researcher to determine the acceptability of the linkages made using CPSIDP.</p> <p>To get started using CPSIDP, users will need to create an extract from ATUS-X containing the CPSIDP variable and an extract from IPUMS-CPS containing CPSIDP and MISH. All ATUS-X cases have an implicit value of MIS=8 if they were also in the CPS (see PRESENCE). Note that if the ATUS user wants to link the ATUS record to all possible CPS observations, a one to many merge must be performed. If the user only wants to link the ATUS observation to one CPS observation, a one to one merge may be performed.</p>

	Users who want to link ATUS-X to the CPS Education, Food Security, or Volunteer supplements may also take advantage of pre-linked files that contain adjusted weights for analysis of linked ATUS-CPS data.
